CLOUDFIX

Partner Information Pack

About CloudFix
Some tools just find one-off cost savings. CloudFix is the automatic, always-running way to find and fix AWS-recommended savings opportunities. It literally never stops — so neither do your savings. [Read more](#)

Sales approach - *Challenges, our approach and outcomes for CloudFix AWS projects*

Cloud cost optimization, or reducing spend, is currently the number one priority for IT & FinOps executives. Most tools only offer recommendations for how to save money but don't help companies **realize savings.**

CloudFix was designed to not only find ways to save money on your AWS cloud spend, but give you a way to realize those savings in an **automated, always-running** fashion. We focus on **fixing** and not only visualizing cloud savings opportunities.

CloudFix monitors and filters weekly AWS advisories, applies easy and secure recommendations to your AWS environment, and allows you to automate those fixes with confidence.

The **free** CloudFix Savings Assessment allows you to connect your AWS account and see for yourself exactly how much your potential savings are, per specific fixer, before purchasing the solution. The ROI is undeniable.

CloudFix will save you on 10% on your AWS bill, 15-60% per AWS service, while also freeing up your engineers' time to focus on larger, more impactful initiatives.

Immediate and compounding annual dollar savings that deliver AWS cloud cost reductions combined with significant team efficiency gains make adding CloudFix to your AWS toolbox non-negotiable.
